Ho Dang Huu Trong

Software Developer, AI Researcher

Email: hodanghuutrong@gmail.com
Gender Male
Website: https://github.com/hdhtrong
Phone 0915067097
Số điện thoại: 0915067097
Address Ho Chi Minh City, Vietnam
Địa chỉ: Ho Chi Minh City, Vietnam

CAREER OBJECTIVE

I aim to utilize my programming expertise and software engineering experience to develop innovative software solutions that drive societal progress. Building on my background in AI, data science, and data mining, I aim to bridge the gap between research and real-world application—transforming theoretical insights into practical, deployable systems. I am committed to continuously expanding my professional, research, soft, and language skills through ongoing work, collaboration, and learning opportunities.

EDUCATION

2013 - 2017	**HCMC University of Technology and Education** **Information Technology** Graduated with a very good engineering degree, with a solid foundation in basic programming concepts and software engineering.
2022 - 2024	**International University - VNU HCMC** **Master of Information Technology** Mastered advanced programming concepts and contributed to research in AI, data mining, and recommender systems.

SKILLS

Programming Skills	• **Programming Languages:** C#, Java, Python • **Core Competencies:** Object-Oriented Programming, Data Structures & Algorithms, System Design • **Databases:** MS SQL Server, MySQL, MongoDB • **Web Development:** ASP.NET MVC, RESTful APIs • **Software Engineering:** Microservices Architecture, Docker, Git
Research Skills	• **AI & Data Skills:** Machine Learning (PyTorch), Data Mining, Data Processing, Recommender Systems • **Academic Writing:** Experienced in developing and publishing research papers in Scopus-indexed journals
Soft Skills	• Teamwork, time management, critical & logical thinking • Adaptable and open to learning new things.
English	• **IELTS Academic 7.5** (R 8.5, L 7.5, S 7.0, W 6.5)

WORK EXPERIENCE

10/2017 - 02/2020	**HCMC University of Technology and Education** **SOFTWARE DEVELOPER, TEACHING ASISTANT** Collected and analyzed user requirements, designed relational and NoSQL databases, architected software systems, and developed RESTful APIs. Handle some paperwork Teaching assistant in an object-oriented programming course
03/2020 - Present	**International University - Vietnam National University, HCMC** **SOFTWARE DEVELOPER, RESEARCH ASISTANT**

Collected and analyzed user requirements, designed relational and NoSQL databases, architected software systems, and developed RESTful APIs.
Handle some paperwork
Research Assistant (Deep Learning, Data Mining, Recommender Systems): Conducted data preprocessing, implemented model architectures, performed experimental analysis, and contributed to research paper writing.

INTERESTS

- Algorithm, system architecture, AI, and new technologies research
- Badminton, running, music, books, and traveling

CERTIFICATIONS

2025 Certificate in University Lecturers' Professional Training issued by Hanoi Pedagogical University 2

NOTABLE SOFTWARE PPROJECTS

10/2017 - 12/2017 **HCMUTE Admission Dashboard: Visualizes multi-year admission trends, including percentage changes and acceptance rates, providing an overview of the university's admission landscape.**
Technologies: ASP.NET MVC, C#, MS SQL Server
Role: Led requirement gathering, defined project tasks, assigned work to team members, and designed the data warehouse, software architecture, and APIs.

01/2018 - 06/2018 **HCMUTE Undergraduate Admissions Portal: Provides comprehensive information on undergraduate programs, admission requirements, and application procedures.**
Technologies: Java Spring MVC, MySQL
Role: Gather user requirements, design databases, and software architectures

07/2018 - 12/2018 **HCMUTE Quality Assurance Hub: Manages internal quality assurance processes to maintain high academic standards and support continuous institutional improvement.**
Technologies: Java Spring Boot, MongoDB
Role: Gather user requirements, design databases, and design software API

03/2020 - 12/2020 **HCMIU CIS Website: Handles requests for IT and administrative services, including network issues, computer support, email accounts, and academic accounts.**
Technologies: C#, ASP.NET MVC, MS SQL Server
Role: Maintaining and building more functionalities

05/2020 - Now **HCMIU Admission Form Website: Facilitates student applications by allowing prospective students to submit their registration forms online for admission to the university**
Technologies: C#, ASP.NET MVC, MySQL
Role: Led requirement analysis, defined and assigned project tasks, and designed the databases, system architecture, and APIs; maintained and updated the system annually.

01/2021 - Now **HCMIU Admission Result Website: Allows students to check admission results, submit personal information, and complete enrollment procedures, providing an administration dashboard.**
Technologies: C#, ASP.NET MVC, MS SQL Server
Role: Led requirement analysis, defined and assigned project tasks, and designed the databases, system architecture, and APIs; maintained and updated the system annually.

07/2025 - Now **HCMIU Microservices System (Ongoing): a microservices-based system to support the university's digital transformation initiatives.**
Technologies: ASP.NET Core, Entity Framework Core, JWT & ASP.NET Core Identity, MS SQL Server, Ocelot, Consul, RabbitMQ, Elasticsearch & Kibana, Docker, Docker Compose, ASP.NET API Versioning

Role: Leading the design and development of a microservices-based system, defining project tasks, implementing APIs, and ensuring scalable, secure, and maintainable solutions.

RESEARCH PAPERS (03 PUBLISHED PAPERS, 02 SUMMITED PAPERS)

Published: Nguyen, Sang & Ho, Dang & Nguyen, Ngoc. (2023). An Ontology-Based Question Answering System for University Admissions Advising. Intelligent Automation & Soft Computing. 36. 601-616. 10.32604/iasc.2023.032080. 10/2021 - 5/2022

Technologies: Java, Ontology, Protégé

Role: Collected and prepared domain data, designed and built an ontology using Protégé, and developed a Java-based web application to implement an ontology-driven chatbot for university admissions.
Outcome: Developed an ontology-based QA chatbot capable of semantic reasoning to generate accurate and meaningful responses to admission-related queries.

Published: D.H.T. Ho and T.T.S. Nguyen, Self-attentive sequential recommendation models enriched with more features. Link: https://doi.org/10.1145/3695719.3695727 05/2023 - 05/2024

Technologies: Python, Pytorch, Google Colaboratory

Role: Conduct experiments on sequential recommendation models by analyzing the data, writing code, writing a project report, and writing a research paper. Online presenter at *the 2024 8th International Conference on Deep Learning Technologies (ICDLT 2024)*
Outcome: Proposed a self-attentive sequential recommendation model that integrates user ratings and item categories into input representations, achieving competitive improvements across multiple recommendation metrics.

Published: Thi Thanh Sang Nguyen; Dang Phuong Ngoc Ho; Dang Huu Trong Ho, Self-attention Based Sequential Recommendation Systems Improved with Reviews Topic Modeling in e-Commerce Transactions. Link: https://link.springer.com/chapter/10.1007/978-3-032-09321-9_7 09/2024 - 06/2025

Technologies: Python, Pytorch, Google Colaboratory

Role: Conduct experiments on sequential recommendation models by analyzing the data, writing code, writing a project report, and writing a research paper.
Outcome: Developed a hybrid recommendation model that combines LDA-based topic clustering with TiSASRec's sequential learning to enhance item ranking and improve recommendation accuracy in e-commerce scenarios.

Submitted: D.H.T. Ho and T.T.S. Nguyen, Improving Self-Attentive Sequential Recommendation Models with more Features and Topic Modeling, submitted to Knowledge and Information Systems. 09/2024 - 06/2025

Technologies: Python, Pytorch, Google Colaboratory

Role: Conduct experiments on sequential recommendation models by analyzing the data, writing code, writing a project report, and writing a research paper.
Outcome: Proposed a topic-modeling–enhanced self-attentive sequential recommendation framework that enriches semantic features and improves data transformation, achieving consistently higher recommendation performance across multiple datasets.

Submitted: Dang Huu Trong Ho and Thi Thanh Sang Nguyen, Self-Attentive Sequential Recommendation enhanced with Session Clustering, submitted to the 18th Asian Conference on Intelligent Information and Database Systems 09/2024 - 06/2025

Technologies: Python, Pytorch, Google Colaboratory

Role: Conduct experiments on sequential recommendation models by analyzing the data, writing code, writing a project report, and writing a research paper.
Outcome: Developed ClusterSASRec, a session-clustering–enhanced self-attentive sequential recommendation framework that enriches SASRec inputs and achieves superior performance over existing models on public datasets.
